

LATISH SHERIGAR

B-703, Sunflower, Flower Valley, Khadakpada, Kalyan - 421301. / mail@latish-sherigar.com / 9819087305

Highly skilled and experienced software developer possessing expertise in software development. Strong knowledge of the full software development life cycle. Quick learner. Sterling reputation for working on multiple technologies with ease and skillfully designing applications.

PROFESSIONAL EXPERIENCE

Mastek Ltd. Mumbai (formerly Keystone Solutions, Mumbai).
Technical Analyst

Jun 2006 - Current

Analyze and evaluate project requirements. Work closely with Functional/business and Technical teams to create practical solutions to fulfill the business needs that also comply with quality standards and technical requirements. Hands on with coding wherever required. Comfortable with multiple technologies such as Java, Oracle PLSQL, Unix etc. Equally comfortable with P&C Insurance Domain. Serving as bridge between the Functional guys and the Technical experts and fill in the gaps wherever required.

Current

- Performing a Techno functional role in the development of Mastek's Property & Casualty Insurance STG Billing suite which is a Object model, Workflow, Business rules and Web Services based application. Responsibilities included understanding the Technical design, features and limitations of the tool kit from the Technical team on which the new application is being developed. Also understanding the business requirement from the Presales and Functional teams. Designing and Developing Object models and Business flows and Business rules for the new application. Coding web services for few modules in Java and apache CXF framework.

Past

- Served as a Functional point of contact for Property & Casualty Insurance Billing for a team of 20 developers.
- Coded web services using Apache CXF framework and Apache common chain framework.
- Coded a testing framework in Java which would generate various combinations of given data and send it to a REST web service.
- Coded a Compiler and Execution engine in Java for an ETL tool which was a GUI only tool. Enabled the whole setup to work seamlessly as a batch process with required error handling and failure control processes.
- Developed backend packages, procedures and triggers in Oracle PLSQL.
- Developed a Ticket dependency tracking tool and a release build tool in Java/PHP and Mysql for the release team to maintain dependency between various releases as a part of project level initiatives.
- Served as a non official technical consultant for many groups outside the project.
- Experienced in working in production support teams with stringent SLA's.

Onsite:

- Onsite UAT product implementation at a New York client for 2 months.

St Xavier's Technical Institute, Mahim, Mumbai.
Software Development Group, Software Consultant

Apr 2004 – Jun 2006

Client: Holy Family Hospital, Mumbai.

Development and maintenance of a Hospital Health care management system.

- Coded a billing module for hospitals Inpatients department in Visual Basic and Oracle PLSQL.
- Migrated business logic from Visual basic to Oracle PLSQL for 2 modules.

- Actively participated in designing and creating interfaces as a part of integration activity for a third part pharmacy product
